-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Prior art fig 1 in view of Heglund and Nishimura et al.

Prior art fig 1 discloses inverter for hybrid vehicle, comprising chargeable battery system, inverter coupled to battery system and motor coupled to inverter, motor having first, second and third windings corresponding to first, second and third phases of motor, see fig 1. Prior art Fig 1 lacks disclosing inverter comprising first –sixth legs connected to winding first and second lead of winding and legs comprising first and second switches. Heglund discloses first through sixth legs connected to first and second leads of windings one through three, see fig 3 and col 4 lines 36-60. Nishimura et al discloses each leg as having first and second switches, see fig 19 #35. It would have been obvious to one of ordinary skill in the art to combine Prior art fig 1 of hybrid vehicle with inverter of Heglund and switch of Nishimura et al for enhanced reliability and cost.
